www.crusaderhealth.org

Started in 1972 as a well-baby outreach clinic with one doctor and one dentist, Crusader Community Health has grown from a single, one-room location to four state-of-the-art medical facilities and a team of more than 300 highly qualified, full-time healthcare professionals.

Today, Crusader provides comprehensive medical and dental care to more than 48,700 patients – almost 20 percent of the residents in our service area. All physicians are American trained. None are volunteers. Patients enjoy the talents and skills of more than 70 board-certified, board-eligible health and dental care providers.

Over the past 42 years, one thing has remained constant: Crusader patients are always treated with dignity and respect. Trust is built, and patient retention is well over the national average. In fact, in a recent independent survey, 97.9 percent of Crusader patients said they would refer Crusader services to family and friends.

Specialties include Women's Health, Family Practice, Internal Medicine, Pediatrics and on-site Specialty Care. Plus, there are complete Dental Services for adults and children. Crusader accepts most insurance plans and, as the area's only Federally Qualified Community Health Center, offers sliding scale discounts to patients based on family size and income.

The exemplary Women's Health team at Crusader is led by five obstetricians and five family doctors. Together with seven midwives

and three nurse practitioners, they offer complete obstetrical services. Crusader Woman's Health provides well-woman exams, including Pap smear and breast exams, prenatal baby care and many other gynecological services, and complete pregnancy services.

Onsite Spanish interpreters are available at each location and we provide translation services in any language.

Many community residents – from all walks of life – choose Crusader as their medical and dental home. It's because of the quality of care, the professional staff and the provider/patient relationships. It's care and respect, day after day, one patient at a time. It's called The Crusader Way. ■
